

Holocene populations, networks and adaptations to new environments

Keywords :

Holocene, Neolithic, Europe, Mediterranean, networks, populations, adaptations

Abstract :

This session aims to bring together different approaches to the transformations and adaptations of Neolithic societies, from the Neolithic Revolution to the transition to the Bronze Age, in the diverse environments of the Mediterranean and Europe. All areas can be addressed from the perspective of transformations and adaptations to new environments: human populations, economy and trade, housing and daily life, social organization and monumental structures, funerary practices and symbolism, etc.

Main Organizers

Session proposed by the commission *Neolithic Civilizations of the Mediterranean and Europe* UISPP
